DETAILED ACTION

Claim Objections

1. Claim 1 is objected to because of the following informalities: reference numerals 8 and 18 are used for describing a measuring value. Appropriate correction is required.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 1-12 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

4. Claim 1 recites the limitation "the real and known reference value" in line 13. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000.

Art Unit: 3761

Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

6. Claims 1-8, and 10 are rejected under 35 U.S.C. 102(e) as being anticipated by Gilmore et al. 5931160.

7. Gilmore et al. teaches an arrangement in connection with a feedback control system connected to an anaesthesia machine, the arrangement comprising: a controllable device/gas mixer and/or ventilator (10), a measuring device /gas monitor (19), a controlling device (12), and a user interface (26), a measuring value, a measuring point, means adapted to feed a reference signal /fresh gas sample to the measuring device, the controlling device is adapted to compare the measuring value obtained from the measuring device (col. 10, lines 10-32), a safety measure/disconnect (col. 17, lines 42-49)/safety valve (col. 15, lines 57 and 63)/alarm signal (col. 17, lines 42-49), and a selector valve (col. 9, lines 3-12).
